Performance

- 1 Optimal road holding, handling and driving comfort
- 2 Damping system adjusts to current road condition and driving situation
- 3 No electronic parts

KONI FSD active

FSD (Frequency Selective Damping) is KONI's patented revolutionary shock absorber technology. Whatever the road condition, whatever the driving style – FSD makes intelligent and autonomous split-second decisions for an optimal fine tuning of the car's shock absorber settings. This way KONI uses FSD to combine the advantages of different damping characteristics – comfortable or sporty – in a single shock absorber. Thanks to innovative KONI technology, the

shock absorber runs without any electronic components. In close cooperation between the research and development laboratories as well as professional test drivers, KONI produces perfect matched damper solutions. Uncompromising quality, passion, innovation and performance.

Maximum axle load

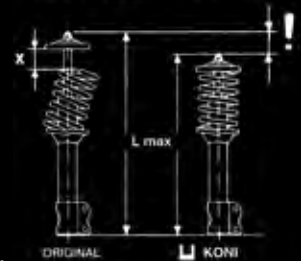

In order to select the right KONI SPORT SPRINGS, KONI needs to know the maximum axle loads of the car. These values are stated on the vehicle identification in the car. This sticker or metal plate is usually located in the engine compartment. Value 1 is the maximum permissible axle load for the front axle. Value 2 is the maximum permissible axle load for the rear axle. These values are also stated on the Tüv certificate. Please check carefully before ordering or mounting the KONI SPORT SPRING Kit.
